

# R. M. A. PRODUCTION SOURCE CODE

In the February, 1937 issue of SUCCESSFUL SERVICING, we asked in an editorial how much and what data were needed by our readers. In a great majority of the answers, the need was expressed for some sort of positive identification of manufacturer and chassis or model number. In the interim this need has been intensified due to the great number of brand name sets that have been marketed. Recognizing this, the Radio Manufacturer's Association has assigned to manufacturers of receivers and components, numbers by means of which the products can be identified both as to source and time of production.

You will notice in the list of company names below and on the following pages that each is identified by a three-digit number. These three digits comprise the first of a six-digit identifying number, the last three being the year and production

period. For example, assume that the number 105631 appears on the name plate or some part of a chassis. This identifies the manufacturer of the receiver as the Air King Products Co., from the first three digits, 105. The fourth digit, 6, means that the set was manufactured in 1946; 1947's set will have 7 as a fourth digit, the next year 8, and so on. The last two digits, 31, establish that the set was produced in the period between July 28 and August 3. These production periods are found in the last two lists on the fourth page of this insert, one being for this year and the second for 1947.

Thus the new R.M.A. identification code is a step forward in the right direction as an aid to servicemen, whereby it is possible for him to recognize obscure chassis; that is, if the original source employs the R.M.A. code on all their production.
